

NQ Air Purification Solutions For Multi-Unit Properties

Higher Air Ventilation = Healthier Buildings

According to Harvard studies, increased ventilation reduces sick building syndrome symptoms, cuts absenteeism, and even reduces infectious disease transmission – **NQ air purification systems are the solution.**

● **NQ500** units can reduce airborne pathogen transmission rates in a hotel lobby to almost 0% between arriving and departing guests*

● The **NQ1000** with 3-5 ACH, can significantly reduce the amount of harmful particles in the air helping to protect venue performers, visitors and staff*

NQs Air Purification Solutions can save an apartment complex up to \$1.8 million and reduce the wattage used for each room to 2 amps compared to 18 amp HVAC systems**

The **Hamden Warming Center** utilized an **NQ500** for the entirety of the winter season for individuals experiencing homelessness and without a single transmission case for 6 months

*Subject to discrepancy of area's space and air flow pattern of space.

**Based on average apartment complex with 100 rooms and multiple common areas.

HEPA Filters Keep Indoor Spaces Healthier

- ▶ Exposure to poor air quality indoors for extended periods of time can lead to significant health risks and has been linked to “Sick Building Syndrome” (SBS)
- ▶ IAQ pollutants can be up to 5X higher indoors than outside
- ▶ Indoor air pollution ranks as one of the top five environmental public health risks

NQ has been providing property managers with leading solutions for healthier indoor air for over 30 years. Let our expert team help protect your building with a proven air purification strategy, [contact us today.](#)
